PROJECT DESIGN PHASE

Problem – Solution Fit

Date	26-09-2026
Team ID	
Project Name	Medical Diagnosis Center by Service Portal (ServiceNow)
Maximum Marks	2 Marks

1. Solution Fit

The Medical Diagnosis Center by Service Portal is a centralized diagnostic management system developed using ServiceNow to simplify the complete diagnostic process, from patient registration to report delivery.

The portal allows patients to register, explore available diagnostic tests, and book appointments online. It reduces dependency on manual registration and helps patients access diagnostic services conveniently.

The system maintains patient details, appointments, diagnostic test records, sample-processing status, and laboratory reports in one organized platform. Lab staff can update test progress, while patients can track their appointments and securely view or download reports without repeatedly contacting the center.

Administrators can manage diagnostic tests, monitor bookings, maintain records, and oversee daily operations through ServiceNow. By bringing these activities together, the solution aims to reduce paperwork, improve information tracking, minimize delays, and provide a smooth, transparent, and patient-friendly diagnostic experience.

2. Problem–Solution Fit Canvas

The canvas below organizes the project into the nine areas shown in the reference document.

1. CUSTOMER SEGMENTS • Patients who need diagnostic tests • Patients booking for themselves or family • Reception staff • Laboratory staff • Center administrators	2. CUSTOMER CONSTRAINTS • Waiting at reception for booking • Need to contact staff for updates • Difficulty tracking test and report status • Patient information may be spread across records	3. AVAILABLE SOLUTIONS / ALTERNATIVES • In-person booking at reception • Phone calls for appointment or report updates • Paper forms and manually maintained records • Separate systems or files for test details and reports
4. CUSTOMER PROBLEMS • Long waiting time for booking • Repeated visits or calls to check status • Uncertainty about report readiness • Difficulty accessing past test information	5. ROOT CAUSES • Manual booking and record handling • No single place for the full diagnostic workflow • Status updates depend on staff communication • Report access is not always self-service	6. CUSTOMER BEHAVIOUR • Wants quick, simple booking • Checks with staff about test progress • Prefers clear information about tests and appointments • Wants convenient and private report access
7. SOLUTION • ServiceNow-based patient portal • Patient registration and profile management • Diagnostic test catalog and appointment booking • Lab staff sample/test status updates • Secure report viewing and downloading	8. CHANNELS • ServiceNow Service Portal through a web browser • Reception staff interface • Lab staff interface • Administrative ServiceNow interface	9. EXPECTED BENEFITS • Reduced manual booking effort • Better organized patient and test records • Easier tracking of appointments and reports • Fewer status-check calls • More convenient patient experience

3. Solution Workflow

Stage	Activity
Patient	Registers or logs in through the ServiceNow portal.
Test Selection	Browses diagnostic tests and chooses a required test.
Appointment	Selects an available appointment slot and receives booking details.
Sample & Testing	Lab staff record sample collection and update test progress.
Report Delivery	Authorized staff publish the report; the patient securely views or downloads it.
Administration	Administrators monitor bookings, records, tests, and report status.

4. Summary

The proposed ServiceNow portal addresses patient and diagnostic-center workflow issues by bringing registration, test booking, sample status, report access, and administrative monitoring into one platform. The intended result is a more organized diagnostic process, easier information tracking, fewer manual status enquiries, and a more convenient experience for patients and staff.
