PROJECT DESIGN PHASE

Proposed Solution – Medical Diagnosis Center

Date	26-09-2026
Team ID	
Project Name	Medical Diagnosis Center by Service Portal (ServiceNow)
Maximum Marks	2 Marks

Proposed Solution

The proposed solution for the Medical Diagnosis Center uses the ServiceNow Service Portal to simplify diagnostic test booking, appointment tracking, sample processing, and report access.

S. No.	Parameter	Description
1	**Problem Statement (Problem to be solved)**	Patients may find it difficult to obtain diagnostic test information, schedule appointments, follow test progress, and access completed reports. Diagnostic center staff also need a centralized way to maintain patient details, test bookings, diagnostic services, and results.
2	**Idea / Solution Description**	Develop a ServiceNow-based Medical Diagnosis Center portal where patients can register, browse available tests, book appointments, track booking and test status, and view or download reports. Lab technicians can update sample collection and test results, while administrators manage diagnostic tests, patient records, appointments, and reports.
3	**Novelty / Uniqueness**	The solution combines patient services, diagnostic test booking, status tracking, laboratory processing updates, and report access in one ServiceNow portal. Role-based access separates patient, laboratory staff, and administrator activities. Configured workflows and notifications help keep users informed about important updates.
4	**Social Impact / Customer Satisfaction**	The portal is intended to reduce manual effort, make diagnostic services easier to access, provide clearer appointment and test-status information, and give patients convenient access to their reports. A centralized process can also improve coordination between patients and diagnostic center staff.
5	**Business Model (Revenue Model)**	The diagnostic center can continue charging customers for diagnostic tests and related services. The ServiceNow portal serves as the digital platform for managing bookings and service delivery. The project does not specify a separate subscription or platform-based revenue model.
6	**Scalability of the Solution**	The solution can be expanded by adding diagnostic tests, users, staff roles, portal pages, workflows, notifications, and reports. Additional integrations may be introduced when needed. ServiceNow tables and role-based access can support further application growth.

Solution Overview

User Role	Main Activities
Patient	Registers or logs in, views diagnostic tests, books an appointment, tracks progress, and accesses available reports.
Lab Technician	Updates sample collection and diagnostic test processing, and makes completed reports available to authorized users.
Administrator	Maintains patient and test information, oversees appointments and reports, and manages portal operations.

Expected Outcome

The proposed ServiceNow portal is designed to bring the main diagnostic-center activities into one organized system. It aims to make appointment and test-status information easier to follow, support secure report access, and improve coordination between patients and staff.
